Lecture I.

The purpose of the following attempt to determine the province of jurisprudence, stated or suggested.

THE matter of jurisprudence is positive law: law, simply and strictly so called: or law set by political superiors to political inferiors. But positive law (or law, simply and strictly so called) is often confounded with objects to which it is related by *resemblance*, and with objects to which it is related in the way of *analogy*: with objects which are *also* signified, *properly* and *improperly*, by the large and vague expression *law*. To obviate the difficulties springing from that confusion, I begin my projected Course with determining the province of jurisprudence, or with distinguishing the matter of jurisprudence from those various related objects: trying to define the subject of which I intend to treat, before I endeavour to analyse its numerous and complicated parts.

Law: what, in most comprehensive literal sense.

[A law, in the most general and comprehensive acceptation in which the term, in its literal meaning, is employed, may be said to be a rule laid down for the guidance of an intelligent being by an intelligent being having power over him. Under this definition are included, and without impropriety, several species. It is necessary to define accurately the line of demarcation which separates these species from one another, as much mistiness and intricacy has been infused into the science of jurisprudence by their being confounded or not clearly distinguished. In the comprehensive sense above indicated, or in the largest meaning which it has, without extension by metaphor or analogy,] the term *law* embraces the following objects: – Laws set by God to his human creatures, and laws set by men to men.

Law of God.

The whole or a portion of the laws set by God to men is frequently styled the law of nature, or natural law: being, in truth, the only natural law of which it is possible to speak without a metaphor, or without a blending of objects which ought to be distinguished broadly. But, rejecting the appellation Law of Nature as ambiguous and misleading, I name those laws or rules, as considered collectively or in a mass, the *Divine law*, or the *law of God.*

Human laws. Two classes.

Laws set by men to men are of two leading or principal classes: classes which are often blended, although they differ extremely; and which, for that reason, should be severed precisely, and opposed distinctly and conspicuously.

1st Class.

Laws set by political superiors.

Of the laws or rules set by men to men, some are established by *political* superiors, sovereign and subject: by persons exercising supreme and subordinate *government*, in independent nations, or independent political societies. The aggregate of the rules thus established, or some aggregate forming a portion of that aggregate, is the appropriate matter of jurisprudence, general or particular. To the aggregate of the rules thus established, or to some aggregate forming a portion of that aggregate, the term *law*, as used simply and strictly, is exclusively applied. But, as contradistinguished to *natural* law, or to the law of *nature* (meaning, by those expressions, the law of God), the aggregate of the rules, established by political superiors, is frequently styled *positive* law, or law existing *by position*. As contradistinguished to the rules which I style *positive morality*, and on which I shall touch immediately, the aggregate of the rules, established by political superiors, may also be marked commodiously with the name of *positive law*. For the sake, then, of getting a name brief and distinctive at once, and agreeably to frequent usage, I style that aggregate of rules, or any portion of that aggregate, *positive law*: though rules, which are *not* established by political superiors, are also *positive*, or exist *by position*, if they be rules or laws, in the proper signification of the term.

2nd class. Laws set by men not political superiors.

Though *some* of the laws or rules, which are set by men to men, are established by political superiors, *others* are *not* established by political superiors, or are *not* established by political superiors, in that capacity or character.

Objects improperly *but by* close analogy *termed* laws.

[Closely analogous to human laws of this second class, are a set of objects frequently but *improperly* termed *laws*, being rules set and enforced by *mere opinion*, that is, by the opinions or sentiments held or felt by an indeterminate body of men in regard to human conduct. Instances of such a use of the term *law* are the expressions – 'The law of honour;' 'The law set by fashion;' and rules of this species constitute much of what is usually termed 'International law.'

The two last placed in one class under the name positive morality.

The aggregate of human laws properly so called belonging to the second of the classes above mentioned, with the aggregate of objects *improperly* but by *close analogy* termed laws, I place together in a common class, and denote them by the term] *positive morality*. The name *morality* severs them from *positive law*, while the epithet *positive* disjoins them from the *law of God*. And to the end of obviating confusion, it is necessary or expedient that they *should* be disjoined from the latter by that distinguishing epithet. For the name *morality* (or *morals*), when standing unqualified or alone, denotes indifferently either of the following objects: namely, positive morality *as it is*, or without regard to its merits; and positive morality *as it would be*, if it conformed to the law of God, and were, therefore, deserving of *approbation*.

Objects metaphorically termed laws.

[Besides the various sorts of rules which are included in the literal acceptation of the term law, and those which are by a close and striking analogy, though improperly, termed laws, there are numerous applications of the term law, which] rest upon a slender analogy and are merely metaphorical or figurative. Such is the case when we talk of *laws* observed by the lower animals; of *laws* regulating the growth or decay of vegetables; of *laws* determining the movements of inanimate bodies or masses. For where *intelligence* is not, or where it is too bounded to take the name of *reason*, and, therefore, is too bounded to conceive the purpose of a law, there is not the *will* which law can work on, or which duty can incite or restrain. Yet through these misapplications of a *name*, flagrant as the metaphor is, has the field of jurisprudence and morals been deluged with muddy speculation.

[Having] suggested the *purpose* of my attempt to determine the province of jurisprudence: to distinguish positive law, the appropriate matter of jurisprudence, from the various objects to which it is related by resemblance, and to which it is related, nearly or remotely, by a strong or slender analogy: I shall [now] state the

essentials of *a law* or *rule* (taken with the largest signification which can be given to the term *properly*).

Laws or rules properly *so called, are a species of commands.*

Every *law* or *rule* (taken with the largest signification which can be given to the term *properly*) is a *command*. Or, rather, laws or rules, properly so called, are a *species* of commands.

Now, since the term *command* comprises the term *law*, the first is the simpler as well as the larger of the two. But, simple as it is, it admits of explanation. And, since it is the *key* to the sciences of jurisprudence and morals, its meaning should be analysed with precision.

Accordingly, I shall endeavour, in the first instance, to analyze the meaning of '*command*:' an analysis which, I fear, will task the patience of my hearers, but which they will bear with cheerfulness, or, at least, with resignation, if they consider the difficulty of performing it. The elements of a science are precisely the parts of it which are explained least easily. Terms that are the largest, and, therefore, the simplest of a series, are without equivalent expressions into which we can resolve them *concisely*. And when we endeavour to *define* them, or to translate them into terms which we suppose are better understood, we are forced upon awkward and tedious circumlocutions.

The meaning of the term command.

If you express or intimate a wish that I shall do or forbear from some act, and if you will visit me with an evil in case I comply not with your wish, the *expression* or *intimation* of your wish is a *command*. A command is distinguished from other significations of desire, not by the style in which the desire is signified, but by the power and the purpose of the party commanding to inflict an evil or pain in case the desire be disregarded. If you cannot or will not harm me, in case I comply not with your wish, the expression of your wish is not a command, although you utter your wish in imperative phrase. If you are able and willing to harm me in case I comply not with your wish, the expression of your wish amounts to a command, although you are prompted by a spirit of courtesy to utter it in the shape of a request. '*Preces* erant, sed *quibus contradici non posset*.' Such is the language of Tacitus, when speaking of a petition by the soldiery to a son and lieutenant of Vespasian.

A command, then, is a signification of desire. But a command is distinguished from other significations of desire by this peculiar-

ity: that the party to whom it is directed is liable to evil from the other, in case he comply not with the desire.

The meaning of the term duty.

Being liable to evil from you if I comply not with a wish which you signify, I am *bound* or *obliged* by your command, or I lie under a *duty* to obey it. If, in spite of that evil in prospect, I comply not with the wish which you signify, I am said to disobey your command, or to violate the duty which it imposes.

The terms command *and* duty *are correlative.*

Command and duty are, therefore, correlative terms: the meaning denoted by each being implied or supposed by the other. Or (changing the expression) wherever a duty lies, a command has been signified; and whenever a command is signified, a duty is imposed.

Concisely expressed, the meaning of the correlative expressions is this. He who will inflict an evil in case his desire be disregarded, utters a command by expressing or intimating his desire: He who is liable to the evil in case he disregard the desire, is bound or obliged by the command.

The meaning of the term sanction.

The evil which will probably be incurred in case a command be disobeyed or (to use an equivalent expression) in case a duty be broken, is frequently called a *sanction*, or an *enforcement of obedience*. Or (varying the phrase) the command or the duty is said to be *sanctioned* or *enforced* by the chance of incurring the evil.

Considered as thus abstracted from the command and the duty which it enforces, the evil to be incurred by disobedience is frequently styled a *punishment*. But, as punishments, strictly so called, are only a *class* of sanctions, the term is too narrow to express the meaning adequately.

To the existence of a command, a duty, and a sanction, a violent *motive to compliance is not requisite.*

I observe that Dr. Paley, in his analysis of the term *obligation*, lays much stress upon the *violence* of the motive to compliance. In so far as I can gather a meaning from his loose and inconsistent statement, his meaning appears to be this: that unless the motive to compliance be *violent* or *intense*, the expression or intimation of a wish is not a *command*, nor does the party to whom it is directed lie under a *duty* to regard it.

If he means, by a *violent* motive, a motive operating with certainty, his proposition is manifestly false. The greater the evil to be incurred in case the wish be disregarded, and the greater the chance of incurring it on that same event, the greater, no

doubt, is the *chance* that the wish will *not* be disregarded. But no conceivable motive will *certainly* determine to compliance, or no conceivable motive will render obedience inevitable. If Paley's proposition be true, in the sense which I have now ascribed to it, commands and duties are simply impossible. Or, reducing his proposition to absurdity by a consequence as manifestly false, commands and duties are possible, but are never disobeyed or broken.

If he means by a *violent* motive, an evil which inspires fear, his meaning is simply this: that the party bound by a command is bound by the prospect of an evil. For that which is not feared is not apprehended as an evil; or (changing the shape of the expression) is not an evil in prospect.

The truth is, that the magnitude of the eventual evil, and the magnitude of the chance of incurring it, are foreign to the matter in question. The greater the eventual evil, and the greater the chance of incurring it, the greater is the efficacy of the command, and the greater is the strength of the obligation: Or (substituting expressions exactly equivalent), the greater is the *chance* that the command will be obeyed, and that the duty will not be broken. But where there is the smallest chance of incurring the smallest evil, the expression of a wish amounts to a command, and, therefore, imposes a duty. The sanction, if you will, is feeble or insufficient; but still there *is* a sanction, and, therefore, a duty and a command.

Rewards are not sanctions.

By some celebrated writers (by Locke, Bentham, and, I think, Paley), the term *sanction*, or *enforcement of obedience*, is applied to conditional good as well as to conditional evil: to reward as well as to punishment. But, with all my habitual veneration for the names of Locke and Bentham, I think that this extension of the term is pregnant with confusion and perplexity.

Rewards are, indisputably, *motives* to comply with the wishes of others. But to talk of commands and duties as *sanctioned* or *enforced* by rewards, or to talk of rewards as *obliging* or *constraining* to obedience, is surely a wide departure from the established meaning of the terms.

If *you* expressed a desire that *I* should render a service, and if you proffered a reward as the motive or inducement to render it, *you* would scarcely be said to *command* the service, nor should

I, in ordinary language, be *obliged* to render it. In ordinary language, *you* would *promise* me a reward, on condition of my rendering the service, whilst *I* might be *incited* or *persuaded* to render it by the hope of obtaining the reward.

Again: If a law hold out a *reward*, as an inducement to do some act, an eventual *right* is conferred, and not an *obligation* imposed, upon those who shall act accordingly: The *imperative* part of the law being addressed or directed to the party whom it requires to *render* the reward.

In short, I am determined or inclined to comply with the wish of another, by the fear of disadvantage or evil. I am also determined or inclined to comply with the wish of another, by the hope of advantage or good. But it is only by the chance of incurring *evil*, that I am *bound* or *obliged* to compliance. It is only by conditional *evil*, that duties are *sanctioned* or *enforced*. It is the power and the purpose of inflicting eventual *evil*, and *not* the power and the purpose of imparting eventual *good*, which gives to the expression of a wish the name of a *command*.

If we put *reward* into the import of the term *sanction*, we must engage in a toilsome struggle with the current of ordinary speech; and shall often slide unconsciously, notwithstanding our efforts to the contrary, into the narrower and customary meaning.

The meaning of the term command, *briefly re-stated.*

It appears, then, from what has been premised, that the ideas or notions comprehended by the term *command* are the following. 1. A wish or desire conceived by a rational being, that another rational being shall do or forbear. 2. An evil to proceed from the former, and to be incurred by the latter, in case the latter comply not with the wish. 3. An expression or intimation of the wish by words or other signs.

The inseparable connexion of the three terms, command, duty *and* sanction.

It also appears from what has been premised, that *command*, *duty*, and *sanction* are inseparably connected terms: that each embraces the same ideas as the others, though each denotes those ideas in a peculiar order or series.

'A wish conceived by one, and expressed or intimated to another, with an evil to be inflicted and incurred in case the wish be disregarded,' are signified directly and indirectly by each of the three expressions. Each is the name of the same complex notion.

The manner of that connexion.

But when I am talking *directly* of the expression or intimation of the wish, I employ the term *command*: The expression or intimation of the wish being presented *prominently* to my hearer; whilst the evil to be incurred, with the chance of incurring it, are kept (if I may so express myself) in the background of my picture.

When I am talking *directly* of the chance of incurring the evil, or (changing the expression) of the liability or obnoxiousness to the evil, I employ the term *duty*, or the term *obligation*: The liability or obnoxiousness to the evil being put foremost, and the rest of the complex notion being signified implicitly.

When I am talking *immediately* of the evil itself, I employ the term *sanction*, or a term of the like import: The evil to be incurred being signified directly; whilst the obnoxiousness to that evil, with the expression or intimation of the wish, are indicated indirectly or obliquely.

To those who are familiar with the language of logicians (language unrivalled for brevity, distinctness, and precision), I can express my meaning accurately in a breath. – Each of the three terms *signifies* the same notion; but each *denotes* a different part of that notion, and *connotes* the residue.

Laws *or* rules *distinguished from commands which are* occasional *or* particular.

Commands are of two species. Some are *laws* or *rules*. The others have not acquired an appropriate name, nor does language afford an expression which will mark them briefly and precisely. I must, therefore, note them as well as I can by the ambiguous and inexpressive name of '*occasional* or *particular* commands.'

The term *laws* or *rules* being not unfrequently applied to occasional or particular commands, it is hardly possible to describe a line of separation which shall consist in every respect with established forms of speech. But the distinction between laws and particular commands may, I think, be stated in the following manner.

By every command, the party to whom it is directed is obliged to do or to forbear.

Now where it obliges *generally* to acts or forbearances of a *class*, a command is a law or rule. But where it obliges to a *specific* act or forbearance, or to acts or forbearances which it determines *specifically* or *individually*, a command is occasional or particular.

In other words, a class or description of acts is determined by a law or rule, and acts of that class or description are enjoined or forbidden generally. But where a command is occasional or particular, the act or acts, which the command enjoins or forbids, are assigned or determined by their specific or individual natures as well as by the class or description to which they belong.

The statement which I have given in abstract expressions I will now endeavour to illustrate by apt examples.

If you command your servant to go on a given errand, or *not* to leave your house on a given evening, or to rise at such an hour on such a morning, or to rise at that hour during the next week or month, the command is occasional or particular. For the act or acts enjoined or forbidden are specially determined or assigned.

But if you command him *simply* to rise at that hour, or to rise at that hour *always*, or to rise at that hour *till further orders*, it may be said, with propriety, that you lay down a *rule* for the guidance of your servant's conduct. For no specific act is assigned by the command, but the command obliges him generally to acts of a determined class.

If a regiment be ordered to attack or defend a post, or to quell a riot, or to march from their present quarters, the command is occasional or particular. But an order to exercise daily till further orders shall be given would be called a *general* order, and *might* be called a *rule.*

If Parliament prohibited simply the exportation of corn, either for a given period or indefinitely, it would establish a law or rule: a *kind* or *sort* of acts being determined by the command, and acts of that kind or sort being *generally* forbidden. But an order issued by Parliament to meet an impending scarcity, and stopping the exportation of corn *then shipped and in port*, would not be a law or rule, though issued by the sovereign legislature. The order regarding exclusively a specified quantity of corn, the negative acts or forbearances, enjoined by the command, would be determined specifically or individually by the determinate nature of their subject.

As issued by a sovereign legislature, and as wearing the form of a law, the order which I have now imagined would probably be *called* a law. And hence the difficulty of drawing a distinct boundary between laws and occasional commands.

Again: An act which is not an offence, according to the existing law, moves the sovereign to displeasure: and, though the authors of the act are legally innocent or unoffending, the sovereign commands that they shall be punished. As enjoining a specific punishment in that specific case, and as not enjoining generally acts or forbearances of a class, the order uttered by the sovereign is not a law or rule.

Whether such an order would be *called* a law, seems to depend upon circumstances which are purely immaterial: immaterial, that is, with reference to the present purpose, though material with reference to others. If made by a sovereign assembly deliberately, and with the forms of legislation, it would probably be called a law. If uttered by an absolute monarch, without deliberation or ceremony, it would scarcely be confounded with acts of legislation, and would be styled an arbitrary command. Yet, on either of these suppositions, its nature would be the same. It would not be a law or rule, but an occasional or particular command of the sovereign One or Number.

To conclude with an example which best illustrates the distinction, and which shows the importance of the distinction most conspicuously, *judicial commands* are commonly occasional or particular, although the commands which they are calculated to enforce are commonly laws or rules.

For instance, the lawgiver commands that thieves shall be hanged. A specific theft and a specified thief being given, the judge commands that the thief shall be hanged, agreeably to the command of the lawgiver.

Now the lawgiver determines a class or description of acts; prohibits acts of the class generally and indefinitely; and commands, with the like generality, that punishment shall follow transgression. The command of the lawgiver is, therefore, a law or rule. But the command of the judge is occasional or particular. For he orders a specific punishment, as the consequence of a specific offence.

According to the line of separation which I have now attempted to describe, a law and a particular command are distinguished thus. – Acts or forbearances of a *class* are enjoined *generally* by the former. Acts *determined specifically*, are enjoined or forbidden by the latter.

A different line of separation has been drawn by Blackstone and others. According to Blackstone and others, a law and a particular command are distinguished in the following manner. – A law obliges *generally* the members of the given community, or a law obliges *generally* persons of a given class. A particular command obliges a *single* person, or persons whom it determines *individually*.

That laws and particular commands are not to be distinguished thus, will appear on a moment's reflection.

For, *first*, commands which oblige generally the members of the given community, or commands which oblige generally persons of given classes, are not always laws or rules.

[Thus, in the case already supposed; that in which the sovereign commands that all corn actually shipped for exportation be stopped and detained; the command is obligatory upon the whole community, but as it obliges them only to a set of acts individually assigned, it is not a law. Again, suppose the sovereign to issue an order, enforced by penalties, for a general mourning,] on occasion of a public calamity. Now, though it is addressed to the community at large, the order is scarcely a rule, in the usual acceptation of the term. For, though it obliges generally the members of the entire community, it obliges to acts which it assigns specifically, instead of obliging generally to acts or forbearances of a class. If the sovereign commanded that *black* should be the dress of his subjects, his command would amount to a law. But if he commanded them to wear it on a specified occasion, his command would be merely particular.

And, *secondly*, a command which obliges exclusively persons individually determined, may amount, notwithstanding, to a law or rule.

For example, A father may set a *rule* to his child or children: a guardian, to his ward: a master, to his slave or servant. And certain of God's *laws* were as binding on the first man, as they are binding at this hour on the millions who have sprung from his loins.

Most, indeed, of the laws which are established by political superiors, or most of the laws which are simply and strictly so called, oblige generally the members of the political community, or oblige generally persons of a class. To frame a system of duties for every individual of the community, were simply impossible: and

if it were possible, it were utterly useless. Most of the laws established by political superiors are, therefore, *general* in a twofold manner: as enjoining or forbidding generally acts of kinds or sorts; and as binding the whole community, or, at least, whole classes of its members.

But if we suppose that Parliament creates and grants an office, and that Parliament binds the grantee to services of a given description, we suppose a law established by political superiors, and yet exclusively binding a specified or determinate person.

Laws established by political superiors, and exclusively binding specified or determinate persons, are styled, in the language of the Roman jurists, *privilegia*. Though that, indeed, is a name which will hardly denote them distinctly: for, like most of the leading terms in actual systems of law, it is not the name of a definite class of objects, but of a heap of heterogeneous objects.[1]

The definition of a law or rule, properly *so called.*

It appears, from what has been premised, that a law, properly so called, may be defined in the following manner.

A law is a command which obliges a person or persons.

But, as contradistinguished or opposed to an occasional or particular command, a law is a command which obliges a person or persons, and obliges *generally* to acts or forbearances of a *class*.

In language more popular but less distinct and precise, a law is a command which obliges a person or persons to a *course* of conduct.

The meaning of the correlative terms superior *and* inferior.

Laws and other commands are said to proceed from *superiors*, and to bind or oblige *inferiors*. I will, therefore, analyze the meaning of those correlative expressions; and will try to strip them of a certain mystery, by which that simple meaning appears to be obscured.

Superiority is often synonymous with *precedence* or *excellence*. We talk of superiors in rank; of superiors in wealth; of superiors in virtue: comparing certain persons with certain other persons; and

[1] Where a *privilegium* merely imposes a duty, it exclusively obliges a determinate person or persons. But where a *privilegium* confers a right, and the right conferred *avails against the world at large*, the law is *privilegium* as viewed from a certain aspect, but is also *a general law* as viewed from another aspect. In respect of the right conferred, the law exclusively regards a determinate person, and, therefore, is *privilegium*. In respect of the duty imposed, and corresponding to the right conferred, the law regards generally the members of the entire community.

This I shall explain particularly at a subsequent point of my Course, when I consider the peculiar nature of so-called *privilegia*, or of so-called *private laws*.

meaning that the former precede or excel the latter in rank, in wealth, or in virtue.

But, taken with the meaning wherein I here understand it, the term *superiority* signifies *might*: the power of affecting others with evil or pain, and of forcing them, through fear of that evil, to fashion their conduct to one's wishes.

For example, God is emphatically the *superior* of Man. For his power of affecting us with pain, and of forcing us to comply with his will, is unbounded and resistless.

To a limited extent, the sovereign One or Number is the superior of the subject or citizen: the master, of the slave or servant: the father, of the child.

In short, whoever can *oblige* another to comply with his wishes, is the *superior* of that other, so far as the ability reaches: The party who is obnoxious to the impending evil, being, to that same extent, the *inferior*.

The might or superiority of God, is simple or absolute. But in all or most cases of human superiority, the relation of superior and inferior, and the relation of inferior and superior, are reciprocal. Or (changing the expression) the party who is the superior as viewed from one aspect, is the inferior as viewed from another.

For example, To an indefinite, though limited extent, the monarch is the superior of the governed: his power being commonly sufficient to enforce compliance with his will. But the governed, collectively or in mass, are also the superior of the monarch: who is checked in the abuse of his might by his fear of exciting their anger; and of rousing to active resistance the might which slumbers in the multitude.

A member of a sovereign assembly is the superior of the judge: the judge being bound by the law which proceeds from that sovereign body. But, in his character of citizen or subject, he is the inferior of the judge: the judge being the minister of the law, and armed with the power of enforcing it.

It appears, then, that the term *superiority* (like the terms *duty* and *sanction*) is implied by the term command. For superiority is the power of enforcing compliance with a wish: and the expression or intimation of a wish, with the power and the purpose of enforcing it, are the constituent elements of a command.

'That *laws* emanate from *superiors*' is, therefore, an identical

proposition. For the meaning which it affects to impart is contained in its subject.

If I mark the peculiar source of a given law, or if I mark the peculiar source of laws of a given class, it is possible that I am saying something which may instruct the hearer. But to affirm of laws universally 'that they flow from *superiors*,' or to affirm of laws universally 'that *inferiors* are bound to obey them,' is the merest tautology and trifling.

Laws (improperly so called) which are not commands.

Like most of the leading terms in the science of jurisprudence and morals, the term *laws* is extremely ambiguous. Taken with the largest signification which can be given to the term properly, *laws* are a species of *commands*. But the term is improperly applied to various objects which have nothing of the imperative character: to objects which are *not* commands; and which, therefore, are *not* laws, properly so called.

Accordingly, the proposition 'that laws are commands' must be taken with limitations. Or, rather, we must distinguish the various meanings of the term *laws*; and must restrict the proposition to that class of objects which is embraced by the largest signification that can be given to the term properly.

[I have already indicated, and shall hereafter more fully describe, the objects improperly termed laws, which are *not* within the province of jurisprudence (being either rules enforced by opinion and closely analogous to laws properly so called, or being laws so called by a metaphorical application of the term merely). There are other objects improperly termed laws (not being commands) which yet may properly be included within the province of jurisprudence. These I shall endeavour to particularise: –]

1. Acts on the part of legislatures to *explain* positive law, can scarcely be called laws, in the proper signification of the term. Working no change in the actual duties of the governed, but simply declaring what those duties are, they properly *are* acts of *interpretation* by legislative authority. Or, to borrow an expression from the writers on the Roman Law, they are acts of *authentic* interpretation.

But, this notwithstanding, they are frequently styled laws; *declaratory* laws, or declaratory statutes. They must, therefore, be noted as forming an exception to the proposition 'that laws are a species of commands.'

It often, indeed, happens (as I shall show in the proper place), that laws declaratory in name are imperative in effect: Legislative, like judicial interpretation, being frequently deceptive; and establishing new law, under guise of expounding the old.

2. Laws to repeal laws, and to release from existing duties, must also be excepted from the proposition 'that laws are a species of commands.' In so far as they release from duties imposed by existing laws, they are not commands, but revocations of commands. They authorize or permit the parties, to whom the repeal extends, to do or to forbear from acts which they were commanded to forbear from or to do. And, considered with regard to *this*, their immediate or direct purpose, they are often named *permissive laws*, or, more briefly and more properly, *permissions*.

Remotely and indirectly, indeed, permissive laws are often or always imperative. For the parties released from duties are restored to liberties or rights: and duties answering those rights are, therefore, created or revived.

But this is a matter which I shall examine with exactness, when I analyze the expressions 'legal right,' 'permission by the sovereign or state,' and 'civil or political liberty.'

3. Imperfect laws, or laws of imperfect obligation, must also be excepted from the proposition 'that laws are a species of commands.'

An imperfect law (with the sense wherein the term is used by the Roman jurists) is a law which wants a sanction, and which, therefore, is not binding. A law declaring that certain acts are crimes, but annexing no punishment to the commission of acts of the class, is the simplest and most obvious example.

Though the author of an imperfect law signifies a desire, he manifests no purpose of enforcing compliance with the desire. But where there is not a purpose of enforcing compliance with the desire, the expression of a desire is not a command. Consequently, an imperfect law is not so properly a law, as counsel, or exhortation, addressed by a superior to inferiors.

Examples of imperfect laws are cited by the Roman jurists. But with us in England, laws professedly imperative are always (I believe) perfect or obligatory. Where the English legislature affects to command, the English tribunals not unreasonably presume that the legislature exacts obedience. And, if no specific sanction be

annexed to a given law, a sanction is supplied by the courts of justice, agreeably to a general maxim which obtains in cases of the kind.

The imperfect laws, of which I am now speaking, are laws which are imperfect, in the sense of *the Roman jurists*: that is to say, laws which speak the desires of political superiors, but which their authors (by oversight or design) have not provided with sanctions. Many of the writers on *morals*, and on the so called *law of nature*, have annexed a different meaning to the term *imperfect*. Speaking of imperfect obligations, they commonly mean duties which are *not legal*: duties imposed by commands of God, or duties imposed by positive morality, as contradistinguished to duties imposed by positive law. An imperfect obligation, in the sense of the Roman jurists, is exactly equivalent to no obligation at all. For the term *imperfect* denotes simply, that the law wants the sanction appropriate to laws of the kind. An imperfect obligation, in the other meaning of the expression, is a religious or a moral obligation. The term *imperfect* does not denote that the law imposing the duty wants the appropriate sanction. It denotes that the law imposing the duty is *not* a law established by a political superior: that it wants that *perfect*, or that surer or more cogent sanction, which is imparted by the sovereign or state.

Laws (properly so called) which may seem not imperative.

I believe that I have now reviewed all the classes of objects, to which the term *laws* is improperly applied. The laws (improperly so called) which I have here lastly enumerated, are (I think) the only laws which are not commands, and which yet may be properly included within the province of jurisprudence. But though these, with the so called laws set by opinion and the objects metaphorically termed laws, are the only laws which *really* are not commands, there are certain laws (properly so called) which may *seem* not imperative. Accordingly, I will subjoin a few remarks upon laws of this dubious character.

1. There are laws, it may be said, which *merely* create *rights*: And, seeing that every command imposes a *duty*, laws of this nature are not imperative.

But, as I have intimated already, and shall show completely hereafter, there are no laws *merely* creating *rights*. There are laws, it is true, which *merely* create *duties*: duties not correlating with correlating rights, and which, therefore may be styled *absolute*.

But every law, really conferring a right, imposes expressly or tacitly a *relative* duty, or a duty correlating with the right. If it specify the remedy to be given, in case the right shall be infringed, it imposes the relative duty expressly. If the remedy to be given be not specified, it refers tacitly to pre-existing law, and clothes the right which it purports to create with a remedy provided by that law. Every law, really conferring a right, is, therefore, imperative: as imperative, as if its only purpose were the creation of a duty, or as if the relative duty, which it inevitably imposes, were merely absolute.

The meanings of the term *right*, are various and perplexed; taken with its proper meaning, it comprises ideas which are numerous and complicated; and the searching and extensive analysis, which the term, therefore, requires, would occupy more room than could be given to it in the present lecture. It is not, however, necessary, that the analysis should be performed here. I propose, in my earlier lectures, to determine the province of jurisprudence; or to distinguish the laws established by political superiors, from the various laws, proper and improper, with which they are frequently confounded. And this I may accomplish exactly enough, without a nice inquiry into the import of the term *right*.

2. According to an opinion which I must notice *incidentally* here, though the subject to which it relates will be treated *directly* hereafter, *customary laws* must be excepted from the proposition 'that laws are a species of commands.'

By many of the admirers of customary laws (and, especially, of their German admirers), they are thought to oblige legally (independently of the sovereign or state), *because* the citizens or subjects have observed or kept them. Agreeably to this opinion, they are not the *creatures* of the sovereign or state, although the sovereign or state may abolish them at pleasure. Agreeably to this opinion, they are positive law (or law, strictly so called), inasmuch as they are enforced by the courts of justice: But, that notwithstanding, they exist *as positive law* by the spontaneous adoption of the governed, and not by position or establishment on the part of political superiors. Consequently, customary laws, considered as positive law, are not commands. And, consequently, customary laws, considered as positive law, are not laws or rules properly so called.

An opinion less mysterious, but somewhat allied to this, is not uncommonly held by the adverse party: by the party which is strongly opposed to customary law; and to all law made judicially, or in the way of judicial legislation. According to the latter opinion, all judge-made law, or all judge-made law established by *subject* judges, is purely the creature of the judges by whom it is established immediately. To impute it to the sovereign legislature, or to suppose that it speaks the will of the sovereign legislature, is one of the foolish or knavish *fictions* with which lawyers, in every age and nation, have perplexed and darkened the simplest and clearest truths.

I think it will appear, on a moment's reflection, that each of these opinions is groundless: that customary law is *imperative*, in the proper signification of the term; and that all judge-made law is the creature of the sovereign or state.

At its origin, a custom is a rule of conduct which the governed observe spontaneously, or not in pursuance of a law set by a political superior. The custom is transmuted into positive law, when it is adopted as such by the courts of justice, and when the judicial decisions fashioned upon it are enforced by the power of the state. But before it is adopted by the courts, and clothed with the legal sanction, it is merely a rule of positive morality: a rule generally observed by the citizens or subjects; but deriving the only force, which it can be said to possess, from the general disapprobation falling on those who transgress it.

Now when judges transmute a custom into a legal rule (or make a legal rule not suggested by a custom), the legal rule which they establish is established by the sovereign legislature. A subordinate or subject judge is merely a minister. The portion of the sovereign power which lies at his disposition is merely delegated. The rules which he makes derive their legal force from authority given by the state: an authority which the state may confer expressly, but which it commonly imparts in the way of acquiescence. For, since the state may reverse the rules which he makes, and yet permits him to enforce them by the power of the political community, its sovereign will 'that his rules shall obtain as law' is clearly evinced by its conduct, though not by its express declaration.

The admirers of customary law love to trick out their idol with mysterious and imposing attributes. But to those who can see the difference between positive law and morality, there is nothing of mystery about it. Considered as rules of positive morality, customary laws arise from the consent of the governed, and not from the position or establishment of political superiors. But, considered as moral rules turned into positive laws, customary laws are established by the state: established by the state directly, when the customs are promulged in its statutes; established by the state circuitously, when the customs are adopted by its tribunals.

The opinion of the party which abhors judge-made laws, springs from their inadequate conception of the nature of commands.

Like other significations of desire, a command is express or tacit. If the desire be signified by *words* (written or spoken), the command is express. If the desire be signified by conduct (or by any signs of desire which are *not* words), the command is tacit.

Now when customs are turned into legal rules by decisions of subject judges, the legal rules which emerge from the customs are *tacit* commands of the sovereign legislature. The state, which is able to abolish, permits its ministers to enforce them: and it, therefore, signifies its pleasure, by that its voluntary acquiescence, 'that they shall serve as a law to the governed.'

My present purpose is merely this: to prove that the positive law styled *customary* (and all positive law made judicially) is established by the state directly or circuitously, and, therefore, is *imperative.* I am far from disputing, that law made judicially (or in the way of improper legislation) and law made by statute (or in the properly legislative manner) are distinguished by weighty differences. I shall inquire, in future lectures, what those differences are; and why subject judges, who are properly ministers of the law, have commonly shared with the sovereign in the business of making it.

Laws which are not *commands, enumerated.*

I assume, then, that the only laws which are not imperative, [and which belong to the subject-matter of jurisprudence,] are the following – 1. Declaratory laws, or laws explaining the import of existing positive law. 2. Laws abrogating or repealing existing positive law. 3. Imperfect laws, or laws of imperfect obligation (with the sense wherein the expression is used by the Roman jurists).

But the space occupied in the science by these improper laws is comparatively narrow and insignificant. Accordingly, although I shall take them into account so often as I refer to them directly, I shall throw them out of account on other occasions. Or (changing the expression) I shall limit the term *law* to laws which are imperative, unless I extend it expressly to laws which are not.

guide of conduct, although it is not armed with a legal or political sanction.

Declaratory laws, and laws repealing laws, ought in strictness to be classed with laws metaphorical or figurative: for the analogy by which they are related to laws imperative and proper is extremely slender or remote. Laws of imperfect obligation (in the sense of the Roman jurists) are laws set or imposed by the opinions of the law-makers, and ought in strictness to be classed with rules of positive morality. But though laws of these three species are merely analogous to laws in the proper acceptation of the term, they are closely connected with positive laws, and are appropriate subjects of jurisprudence. Consequently I treat them as improper laws of anomalous or eccentric sorts, and exclude them from the classes of laws to which in strictness they belong.

[*Note* – on the prevailing tendency to confound what is with what ought to be law or morality, that is, 1st, to confound positive law with the science of legislation, and positive morality with deontology; and 2ndly, to confound positive law with positive morality, and both with legislation and deontology. – (See pp. 140–2.)

1st. Tendency to confound positive law with the science of legislation and positive morality with deontology. Example from Blackstone.

The existence of law is one thing; its merit or demerit is another. Whether it be or be not is one enquiry; whether it be or be not conformable to an assumed standard, is a different enquiry. A law, which actually exists, is a law, though we happen to dislike it, or though it vary from the text, by which we regulate our approbation and disapprobation. This truth, when formally announced as an abstract proposition, is so simple and glaring that it seems idle to insist upon it. But simple and glaring as it is, when enunciated in abstract expressions the enumeration of the instances in which it has been forgotten would fill a volume.

Sir William Blackstone, for example, says in his 'Commentaries,' that the laws of God are superior in obligation to all other laws; that no human laws should be suffered to contradict them; that human laws are of no validity if contrary to them; and that all valid laws derive their force from that Divine original.

Now, he *may* mean that all human laws ought to conform to the Divine laws. If this be his meaning, I assent to it without hesitation. The evils which we are exposed to suffer from the hands of God as a consequence of disobeying His commands are the greatest evils to which we are obnoxious; the obligations which they impose are

consequently paramount to those imposed by any other laws, and if human commands conflict with the Divine law, we ought to disobey the command which is enforced by the less powerful sanction; this is implied in the term *ought*: the proposition is identical, and therefore perfectly indisputable – it is our interest to choose the smaller and more uncertain evil, in preference to the greater and surer. If this be Blackstone's meaning, I assent to his proposition, and have only to object to it, that it tells us just nothing.

Perhaps, again, he means that human lawgivers are themselves obliged by the Divine laws to fashion the laws which they impose by that ultimate standard, because if they do not, God will punish them. To this also I entirely assent: for if the index to the law of God be the principle of utility, that law embraces the whole of our voluntary actions in so far as motives applied from without are required to give them a direction conformable to the general happiness.

But the meaning of this passage of Blackstone, if it has a meaning, seems rather to be this: that no human law which conflicts with the Divine law is obligatory or binding; in other words, that no human law which conflicts with the Divine law *is a law*, for a law without an obligation is a contradiction in terms. I suppose this to be his meaning, because when we say of any transaction that it is invalid or void, we mean that it is not binding: as, for example, if it be a contract, we mean that the political law will not lend its sanction to enforce the contract.

Now, to say that human laws which conflict with the Divine law are not binding, that is to say, are not laws, is to talk stark nonsense. The most pernicious laws, and therefore those which are most opposed to the will of God, have been and are continually enforced as laws by judicial tribunals. Suppose an act innocuous, or positively beneficial, be prohibited by the sovereign under the penalty of death; if I commit this act, I shall be tried and condemned, and if I object to the sentence, that it is contrary to the law of God, who has commanded that human lawgivers shall not prohibit acts which have no evil consequences, the Court of Justice will demonstrate the inconclusiveness of my reasoning by hanging me up, in pursuance of the law of which I have impugned the validity. An exception, demurrer, or plea, founded on the law of God was never heard in a Court of Justice, from the creation of the world down to the present moment.

But this abuse of language is not merely puerile, it is mischievous. When it is said that a law ought to be disobeyed, what is meant is

that we are urged to disobey it by motives more cogent and compulsory than those by which it is itself sanctioned. If the laws of God are certain, the motives which they hold out to disobey any human command which is at variance with them are paramount to all others. But the laws of God are not always certain. All divines, at least all reasonable divines, admit that no scheme of duties perfectly complete and unambiguous was ever imparted to us by revelation. As an index to the Divine will, utility is obviously insufficient. What appears pernicious to one person may appear beneficial to another. And as for the moral sense, innate practical principles, conscience they are merely convenient cloaks for ignorance or sinister interest: they mean either that I hate the law to which I object and cannot tell why, or that I hate the law, and that the cause of my hatred is one which I find it incommodious to avow. If I say openly, I hate the law, *ergo*, it is not binding and ought to be disobeyed, no one will listen to me; but by calling my hate my conscience or my moral sense, I urge the same argument in another and a more plausible form: I seem to assign a reason for my dislike, when in truth I have only given it a sounding and specious name. In times of civil discord the mischief of this detestable abuse of language is apparent. In quiet times the dictates of utility are fortunately so obvious that the anarchical doctrine sleeps, and men habitually admit the validity of laws which they dislike. To prove by pertinent reasons that a law is pernicious is highly useful, because such process may lead to the abrogation of the pernicious law. To incite the public to resistance by determinate views of *utility* may be useful, for resistance, grounded on clear and definite prospects of good, is sometimes beneficial. But to proclaim generally that all laws which are pernicious or contrary to the will of God are void and not to be tolerated, is to preach anarchy, hostile and perilous as much to wise and benign rule as to stupid and galling tyranny.

Another example from Blackstone.

In another passage of his 'Commentaries,' Blackstone enters into an argument to prove that a master cannot have a right to the labour of his slave. Had he contented himself with expressing his *disapprobation*, a very well-grounded one certainly, of the institution of slavery, no objection could have been made to his so expressing himself. But to dispute the existence or the possibility of the right is to talk absurdly. For in every age, and in almost every nation, the right has been given by positive law, whilst that pernicious disposition of positive law has been backed by the positive morality of the free or master classes.

Paley's definition of civil liberty.

Paley's admired definition of civil liberty appears to me to be obnoxious to the very same objection: it is a definition of civil liberty

as it ought to be. 'Civil liberty,' he says, 'is the not being restrained by any law but which conduces in a greater degree to the public welfare;' and this is distinguished from *natural* liberty, which is the not being restrained at all. But when liberty is not exactly synonymous with right, it means, and can mean nothing else, but exemption from restraint or obligation, and is therefore altogether incompatible with law, the very idea of which implies restraint and obligation. But restraint is restraint although it be useful, and liberty is liberty though it may be pernicious. You may, if you please, call a useful restraint *liberty*, and refuse the name liberty to exemption from restraint when restraint is for the public advantage. But by this abuse of language you throw not a ray of light upon the nature of political liberty; you only add to the ambiguity and indistinctness in which it is already involved. I shall have to define and analyze the notion of liberty hereafter, on account of its intimate connexion with right, obligation, and sanction.

Example from the writers on international law.

Grotius, Puffendorf, and the other writers on the so-called law of nations, have fallen into a similar confusion of ideas: they have confounded positive international morality, or the rules which actually obtain among civilized nations in their mutual intercourse, with their own vague conceptions of international morality as it *ought to be*, with that indeterminate something which they conceived it would be, if it conformed to that indeterminate something which they call the law of nature. Professor Von Martens, of Göttingen, who died only a few years ago, is actually the first of the writers on the law of nations who has seized this distinction with a firm grasp, the first who has distinguished the rules which ought to be received in the intercourse of nations, or which would be received if they conformed to an assumed standard of whatever kind, from those which *are* so received, endeavoured to collect from the practice of civilized communities what are the rules actually recognized and acted upon by them, and gave to these rules the name of positive international law.

2nd. Tendency to confound positive law with positive morality, and both with legislation and deontology. Examples from the Roman jurists.

I have given several instances in which law and morality as they ought to be are confounded with the law and morality which actually exist. I shall next mention some examples in which positive law is confounded with positive morality, and both with the science of legislation and deontology.

Those who know the writings of the Roman lawyers only by hearsay are accustomed to admire their philosophy. Now this, in my estimation, is the only part of their writings which deserves contempt. Their extraordinary merit is evinced not in general speculation, but as expositors of the Roman law. They have seized its general principles

with great clearness and penetration, have applied these principles with admirable logic to the explanation of details, and have thus reduced this positive system of law to a compact and coherent whole. But the philosophy which they borrowed from the Greeks, or which, after the examples of the Greeks, they themselves fashioned, is naught. Their attempts to define jurisprudence and to determine the province of the jurisconsult are absolutely pitiable, and it is hardly conceivable how men of such admirable discernment should have displayed such contemptible imbecility.

At the commencement of the digest is a passage attempting to define jurisprudence. I shall first present you with this passage in a free translation, and afterwards in the original. 'Jurisprudence,' says this definition, 'is the knowledge of things divine and human; the science which teaches men to discern the just from the unjust.' 'Jurisprudentia est divinarum atque humanarum rerum notitia, justi atque injusti scientia.' In the excerpt from Ulpian, which is placed at the beginning of the Digest, it is attempted to define the office or province of the jurisconsult. 'Law,' says the passage, 'derives its name from justice, *justitia*, and is the science or skill in the good and the equitable. Law being the creature of justice, we the jurisconsults may be considered as her priests, for justice is the goddess whom we worship, and to whose service we are devoted. Justice and equity are our vocation; we teach men to know the difference between the just and the unjust, the lawful and the unlawful; we strive to reclaim them from vice, not only by the terrors of punishment, but also by the blandishment of rewards; herein, unless we flatter ourselves, aspiring to sound and real philosophy, and not like some whom we could mention, contenting ourselves with vain and empty pretension.' 'Juri operam daturum prius nosse oportet, unde nomen juris descendat. Est autem a justitia appellatum; nam, ut eleganter Celsus definit, jus est ars boni et aequi. Cujus merito quis nos sacerdotes appellet; justitiam namque colimus, et boni et æqui notitiam profitemur, æquum ab iniquo separantes, licitum ab illicito discernentes, bonos non solum metu pœnarum verum etiam prœmiorum quoque exhortatione efficere cupientes, veram, nisi fallor, philosophiam, non simulatam affectantes.'

Were I to present you with all the criticisms which these two passages suggest, I should detain you a full hour. I shall content myself with one observation on the scope and purpose of them both. That is, that they affect to define jurisprudence, or what comes exactly to the same thing, the office or province of the jurisconsult. Now jurisprudence, if it is anything, is the science of law, or at most

the science of law combined with the art of applying it; but what is here given as a definition of it, embraces not only law, but positive morality, and even the test to which both these are to be referred. It therefore comprises the science of legislation and deontology. Further, it affirms that law is the creature of justice, which is as much as to say that it is the child of its own offspring. For when by *just* we mean anything but to express our own approbation we mean something which *accords with some given law*. True, we speak of law and justice, or of law and equity, as opposed to each other, but when we do so, we mean to express mere dislike of the law, or to intimate that it conflicts with another law, the law of God, which is its standard. According to this, every pernicious law is unjust. But, in truth, law is itself the standard of justice. What deviates from any law is unjust with reference to that law, though it may be just with reference to another law of superior authority. The terms just and unjust imply a standard, and conformity to that standard and a deviation from it; else they signify mere dislike, which it would be far better to signify by a grunt or a groan than by a mischievous and detestable abuse of articulate language. But justice is commonly erected into an entity, and spoken of as a legislator, in which character it is supposed to prescribe the law, conformity to which it should denote. The veriest dolt who is placed in a jury box, the merest old woman who happens to be raised to the bench, will talk finely of equity or justice – the justice of the case, the equity of the case, the imperious demands of justice, the plain dictates of equity. He forgets that he is there to enforce *the law of the land*, else he does not administer that justice or that equity with which alone he is immediately concerned.

Example from Lord Mansfield

This is well known to have been a strong tendency of Lord Mansfield – a strange obliquity in so great a man. I will give an instance. By the English law, a promise to give something for the benefit of another is not binding without what is called a consideration, that is, a motive assigned for the promise, which motive must be of a particular kind. Lord Mansfield, however, overruled the distinct provisions of the law by ruling that moral obligation was a sufficient consideration. Now, moral obligation is an obligation imposed by opinion, or an obligation imposed by God: that is, moral obligation is anything which we choose to call so, for the precepts of positive morality are infinitely varying, and the will of God, whether indicated by utility or by a moral sense, is equally matter of dispute. This decision of Lord Mansfield, which assumes that the judge is to enforce morality, enables the judge to enforce just whatever he pleases.

I must here observe that I am not objecting to Lord Mansfield for assuming the office of a legislator. I by no means disapprove of what Mr. Bentham has chosen to call by the disrespectful, and therefore, as I conceive, injudicious, name of judge-made law. For I consider it injudicious to call by any name indicative of disrespect what appears to me highly beneficial and even absolutely necessary. I cannot understand how any person who has considered the subject can suppose that society could possibly have gone on if judges had not legislated, or that there is any danger whatever in allowing them that power which they have in fact exercised, to make up for the negligence or the incapacity of the avowed legislator. That part of the law of every country which was made by judges has been far better made than that part which consists of statutes enacted by the legislature. Notwithstanding my great admiration for Mr. Bentham, I cannot but think that, instead of blaming judges for having legislated, he should blame them for the timid, narrow, and piecemeal manner in which they have legislated, and for legislating under cover of vague and indeterminate phrases, such as Lord Mansfield employed in the above example, and which would be censurable in any legislator.]

Lecture VI.

The connection of the sixth lecture with the first, second, third, fourth, and fifth.

POSITIVE laws, the appropriate matter of jurisprudence, are related in the way of resemblance, or by a close or remote analogy, to the following objects. – 1. In the way of resemblance, they are related to the laws of God. 2. In the way of resemblance, they are related to those rules of positive morality which are laws properly so called. 3. By a close or strong analogy, they are related to those rules of positive morality which are merely opinions or sentiments held or felt by men in regard to human conduct. 4. By a remote or slender analogy, they are related to laws merely metaphorical, or laws merely figurative.

To distinguish positive laws from the objects now enumerated, is the purpose of the present attempt to determine the province of jurisprudence.

In pursuance of the purpose to which I have now adverted, I stated, in my first lecture, the essentials of a *law* or *rule* (taken with the largest signification which can be given to the term *properly*).

In my second, third, and fourth lectures, I stated the marks or characters by which the laws of God are distinguished from other laws. And, stating those marks or characters, I explained the nature of the index to his unrevealed laws, or I explained and examined the hypotheses which regard the nature of that index.

In my fifth lecture, I examined or discussed especially the following principal topics (and I touched upon other topics of secondary or subordinate importance). – I examined the dis-

tinguishing marks of those positive moral rules which are laws properly so called: I examined the distinguishing marks of those positive moral rules which are styled *laws* or *rules* by an analogical extension of the term: and I examined the distinguishing marks of laws merely metaphorical, or laws merely figurative.

I shall finish, in the present lecture, the purpose mentioned above, by explaining the marks or characters which distinguish positive laws, or laws strictly so called. And, in order to an explanation of the marks which distinguish positive laws, I shall analyze the expression *sovereignty*, the correlative expression *subjection*, and the inseparably connected expression *independent political society*. With the ends or final causes for which governments *ought* to exist, or with their different degrees of fitness to attain or approach those ends, I have no concern. I examine the notions of *sovereignty* and *independent political society*, in order that I may finish the purpose to which I have adverted above: in order that I may distinguish completely the appropriate province of jurisprudence from the regions which lie upon its confines, and by which it is encircled. It is necessary that I should examine those notions, in order that I may finish that purpose. For the essential difference of a positive law (or the difference that severs it from a law which is not a positive law) may be stated thus. Every positive law, or every law simply and strictly so called, is set by a sovereign person, or a sovereign body of persons, to a member or members of the independent political society wherein that person or body is sovereign or supreme. Or (changing the expression) it is set by a monarch, or sovereign number, to a person or persons in a state of subjection to its author. Even though it sprung directly from another fountain or source, it *is* a positive law, or a law strictly so called, by the institution of that present sovereign in the character of political superior. Or (borrowing the language of Hobbes) 'the legislator is he, not by whose authority the law was first made, but by whose authority it continues to be a law.'

The distinguishing marks of sovereignty and independent political society.

Having stated the topic or subject appropriate to my present discourse, I proceed to distinguish sovereignty from other superiority or might, and to distinguish society political and independent from society of other descriptions.

The superiority which is styled sovereignty, and the independent political society which sovereignty implies, is distinguished from other superiority, and from other society, by the following marks or characters. – 1. The *bulk* of the given society are in a *habit* of obedience or submission to a *determinate* and *common* superior: let that common superior be a certain individual person, or a certain body or aggregate of individual persons. 2. That certain individual, or that certain body of individuals, is *not* in a habit of obedience to a determinate human superior. Laws (improperly so called) which opinion sets or imposes, may permanently affect the conduct of that certain individual or body. To express or tacit commands of other determinate parties, that certain individual or body may yield occasional submission. But there is no determinate person, or determinate aggregate of persons, to whose commands, express or tacit, that certain individual or body renders habitual obedience.

Or the notions of sovereignty and independent political society may be expressed concisely thus. – If a *determinate* human superior, *not* in a habit of obedience to a like superior, receive *habitual* obedience from the *bulk* of a given society, that determinate superior is sovereign in that society, and the society (including the superior) is a society political and independent.

The relation of sovereignty and subjection.

To that determinate superior, the other members of the society are *subject*: or on that determinate superior, the other members of the society are *dependent*. The position of its other members towards that determinate superior, is *a state of subjection*, or *a state of dependence*. The mutual relation which subsists between that superior and them, may be styled *the relation of sovereign and subject*, or *the relation of sovereignty and subjection*.

Strictly speaking, the sovereign portion of the society, and not the society itself, is independent, sovereign, or supreme.

Hence it follows, that it is only through an ellipsis, or an abridged form of expression, that the *society* is styled *independent*. The party truly independent (independent, that is to say, of a determinate human superior), is not the society, but the sovereign portion of the society: that certain member of the society, or that certain body of its members, to whose commands, expressed or intimated, the generality or bulk of its members render habitual obedience. Upon that certain person, or certain body of persons, the other members of the society are *dependent*: or to that certain person, or certain body of persons, the other members of the

society are *subject*. By 'an independent political society,' or 'an independent and sovereign nation,' we mean a political society consisting of a sovereign and subjects, as opposed to a political society which is merely subordinate: that is to say, which is merely a limb or member of another political society, and which therefore consists entirely of persons in a state of subjection.

In order that a given society may form a society political and independent, the two distinguishing marks which are mentioned above must unite.

In order that a given society may form a society political and independent, the two distinguishing marks which I have mentioned above must unite. The *generality* of the given society must be in the *habit* of obedience to a *determinate* and *common* superior: whilst that determinate person, or determinate body of persons must *not* be habitually obedient to a determinate person or body. It is the union of that positive, with this negative mark, which renders that certain superior sovereign or supreme, and which renders that given society (including that certain superior) a society political and independent.

To show that the union of those marks renders a given society a society political and independent, I call your attention to the following positions and examples.

1. In order that a given society may form a society political, the generality or bulk of its members must be in a *habit* of obedience to a determinate and common superior.

In case the generality of its members obey a determinate superior, but the obedience be rare or transient and not habitual or permanent, the relation of sovereignty and subjection is not created thereby between that certain superior and the members of that given society. In other words, that determinate superior and the members of that given society do not become thereby an independent political society. Whether that given society be political and independent or not, it is not an independent political society whereof that certain superior is the sovereign portion.

For example: In 1815 the allied armies occupied France; and so long as the allied armies occupied France, the commands of the allied sovereigns were obeyed by the French government, and, through the French government, by the French people generally. But since the commands and the obedience were comparatively rare and transient, they were not sufficient to constitute the relation of sovereignty and subjection between the allied sovereigns and the members of the invaded nation. In spite of those com-

mands, and in spite of that obedience, the French government was sovereign or independent. Or in spite of those commands, and in spite of that obedience, the French government and its subjects were an independent political society whereof the allied sovereigns were not the sovereign portion.

Now if the French nation, before the obedience to those sovereigns, had been an independent society in a state of nature or anarchy, it would not have been changed by the obedience into a society political. And it would not have been changed by the obedience into a society political, because the obedience was not habitual. For, inasmuch as the obedience was not habitual, it was not changed by the obedience from a society political and independent, into a society political but subordinate. – A given society, therefore, is not a society political, unless the generality of its members be in a *habit* of obedience to a determinate and common superior.

Again: A feeble state holds its independence precariously, or at the will of the powerful states to whose aggressions it is obnoxious. And since it is obnoxious to their aggressions, it and the bulk of its subjects render obedience to commands which they occasionally express or intimate. Such, for instance, is the position of the Saxon government and its subjects in respect of the conspiring sovereigns who form the Holy Alliance. But since the commands and the obedience are comparatively few and rare, they are not sufficient to constitute the relation of sovereignty and subjection between the powerful states and the feeble state with its subjects. In spite of those commands, and in spite of that obedience, the feeble state is sovereign or independent. Or in spite of those commands, and in spite of that obedience, the feeble state and its subjects are an independent political society whereof the powerful states are not the sovereign portion. Although the powerful states are permanently *superior*, and although the feeble state is permanently *inferior*, there is neither a *habit* of command on the part of the former, nor a *habit* of obedience on the part of the latter. Although the latter is unable to defend and maintain its independence, the latter is independent of the former in fact or practice.

From the example now adduced, as from the example adduced before, we may draw the following inference: that a given society is not a society political, unless the generality of its members be

in a *habit* of obedience to a determinate and common superior. – By the obedience to the powerful states, the feeble state and its subjects are not changed from an independent, into a subordinate political society. And they are not changed by the obedience into a subordinate political society, because the obedience is not habitual. Consequently, if they were a natural society (setting that obedience aside), they would not be changed by that obedience into a society political.

2. In order that a given society may form a society political, habitual obedience must be rendered, by the *generality* or *bulk* of its members, to a determinate and *common* superior. In other words, habitual obedience must be rendered, by the *generality* or *bulk* of its members, to *one and the same* determinate person, or determinate body of persons.

Unless habitual obedience be rendered by the *bulk* of its members, and be rendered by the bulk of its members to *one and the same* superior, the given society is either in a state of nature, or is split into two or more independent political societies.

For example: In case a given society be torn by intestine war, and in case the conflicting parties be nearly balanced, the given society is in one of the two positions which I have now supposed. – As there is no common superior to which the bulk of its members render habitual obedience, it is not a political society single or undivided. – If the bulk of each of the parties be in a habit of obedience to its head, the given society is broken into two or more societies, which, perhaps, may be styled independent political societies. – If the bulk of each of the parties be not in that habit of obedience, the given society is simply or absolutely in a state of nature or anarchy. It is either resolved or broken into its individual elements, or into numerous societies of an extremely limited size: of a size so extremely limited, that they could hardly be styled societies independent and *political*. For, as I shall show hereafter, a given independent society would hardly be styled *political*, in case it fell short of a *number* which cannot be fixed with precision, but which may be called considerable, or not extremely minute.

3. In order that a given society may form a society political, the generality or bulk of its members must habitually obey a superior *determinate* as well as common.

On this position I shall not insist here. For I have shown sufficiently in my fifth lecture, that no indeterminate party can command expressly or tacitly, or can receive obedience or submission: that no indeterminate body is capable of corporate conduct, or is capable, as a body, of positive or negative deportment.

4. It appears from what has preceded, that, in order that a given society may form a society political, the bulk of its members must be in a habit of obedience to a certain and common superior. But, in order that the given society may form a society political and independent, that certain superior must *not* be habitually obedient to a determinate human superior.

The given society may form a society political and independent, although that certain superior be habitually affected by laws which opinion sets or imposes. The given society may form a society political and independent, although that certain superior render occasional submission to commands of determinate parties. But the society is not independent, although it may be political, in case that certain superior habitually obey the commands of a certain person or body.

Let us suppose, for example, that a viceroy obeys habitually the author of his delegated powers. And, to render the example complete, let us suppose that the viceroy receives habitual obedience from the generality or bulk of the persons who inhabit his province. – Now though he commands habitually within the limits of his province, and receives habitual obedience from the generality or bulk of its inhabitants, the viceroy is not sovereign within the limits of his province, nor are he and its inhabitants an independent political society. The viceroy, and (through the viceroy) the generality or bulk of its inhabitants, are habitually obedient or submissive to the sovereign of a larger society. He and the inhabitants of his province are therefore in a state of subjection to the sovereign of that larger society. He and the inhabitants of his province are a society political but subordinate, or form a political society which is merely a limb of another.

A society independent but natural.

A natural society, a society in a state of nature, or a society independent but natural, is composed of persons who are connected by mutual intercourse, but are not members, sovereign or subject, of any society political. None of the persons who compose it lives in the positive state which is styled a state of subjection:

or all the persons who compose it live in the negative state which is styled a state of independence.

Society formed by the intercourse of independent political societies.

Considered as entire communities, and considered in respect of one another, independent political societies live, it is commonly said, in a state of nature. And considered as entire communities, and as connected by mutual intercourse, independent political societies form, it is commonly said, a natural society. These expressions, however, are not perfectly apposite. Since all the members of each of the related societies are members of a society political, none of the related societies is strictly in a state of nature: nor can the larger society formed by their mutual intercourse be styled strictly a natural society. Speaking strictly, the several members of the several related societies are placed in the following positions. The sovereign and subject members of each of the related societies form a society political: but the sovereign portion of each of the related societies lives in the negative condition which is styled a state of independence.

Society formed by the intercourse of independent political societies, is the province of international law, or of the law obtaining between nations. For (adopting a current expression) international law, or the law obtaining between nations, is conversant about the conduct of independent political societies considered as entire communities: *circa negotia et causas gentium integrarum.* Speaking with greater precision, international law, or the law obtaining between nations, regards the conduct of sovereigns considered as related to one another.

And hence it inevitably follows, that the law obtaining between nations is not positive law: for every positive law is set by a given sovereign to a person or persons in a state of subjection to its author. As I have already intimated, the law obtaining between nations is law (improperly so called) set by general opinion. The duties which it imposes are enforced by moral sanctions: by fear on the part of nations, or by fear on the part of sovereigns, of provoking general hostility, and incurring its probable evils, in case they shall violate maxims generally received and respected.

A society political but subordinate.

A society political but subordinate is merely a limb or member of a society political and independent. All the persons who compose it, including the person or body which is its immediate chief, live in a state of subjection to one and the same sovereign.

A society not political, but forming a limb or member of a society political and independent.

Besides societies political and independent, societies independent but natural, society formed by the intercourse of independent political societies, and societies political but subordinate, there are societies which will not quadrate with any of those descriptions. Though, like a society political but subordinate, it forms a limb or member of a society political and independent, a society of the class in question is not a political society. Although it consists of members living in a state of subjection, it consists of subjects considered as private persons. – A society consisting of parents and children, living in a state of subjection, and considered in those characters, may serve as an example.

To distinguish societies political but subordinate from societies not political but consisting of subject members, is to distinguish the rights and duties of subordinate political superiors from the rights and duties of subjects considered as private persons. And before I can draw that distinction, I must analyze many expressions of large and intricate meaning which belong to the detail of jurisprudence. But an explanation of that distinction is not required by my present purpose. To the accomplishment of my present purpose, it is merely incumbent upon me to determine the notion of sovereignty, with the inseparably connected notion of independent political society. For every positive law, or every law simply and strictly so called, is set directly or circuitously by a monarch or sovereign number to a person or persons in a state of subjection to its author.

The definition of the abstract term independent political society *(including the definition of the correlative term* sovereignty*) cannot be rendered in expressions of perfectly precise import, and is therefore a fallible test of specific or particular cases.*

The definition of the abstract term *independent political society* (including the definition of the correlative term *sovereignty*) cannot be rendered in expressions of perfectly precise import, and is therefore a fallible test of specific or particular cases. The least imperfect definition which the abstract term will take, would hardly enable us to fix the class of every possible society. It would hardly enable us to determine of every *independent* society, whether it were *political* or *natural*. It would hardly enable us to determine of every *political* society, whether it were *independent* or *subordinate*.

In order that a given society may form a society political and independent, the positive and negative marks which I have mentioned above must unite. The *generality* or *bulk* of its members must be in a *habit* of obedience to a *certain* and *common* superior:

whilst that certain person, or certain body of persons, must *not* be habitually obedient to a certain person or body.

But, in order that the *bulk* of its members may render obedience to a *common* superior, *how many* of its members, or *what proportion* of its members, must render obedience to *one and the same* superior? And, assuming that the bulk of its members render obedience to a common superior, *how often* must they render it, and *how long* must they render it, in order that that obedience may be *habitual*? – Now since these questions cannot be answered precisely, the positive mark of sovereignty and independent political society is a fallible test of specific or particular cases. It would not enable us to determine of every *independent* society, whether it were *political* or *natural*.

In the cases of independent society which lie, as it were, at the extremes, we should apply that positive test without a moment's difficulty, and should fix the class of the society without a moment's hesitation. – In some of those cases, so large a proportion of the members obey the same superior, and the obedience of that proportion is so frequent and continued, that, without a moment's difficulty and without a moment's hesitation, we should pronounce the society *political*: that, without a moment's difficulty and without a moment's hesitation, we should say the *generality* of its members were in a *habit* of obedience or submission to a certain and *common* superior. Such, for example, is the ordinary state of England, and of every independent society somewhat advanced in civilization. – In other of those cases, obedience to the same superior is rendered by so few of the members, or general obedience to the same is so unfrequent and broken, that, without a moment's difficulty and without a moment's hesitation, we should pronounce the society *natural*: that, without a moment's difficulty and without a moment's hesitation, we should say the *generality* of its members were *not* in a *habit* of obedience to a certain and *common* superior. Such, for example, is the state of the independent and savage societies which subsist by hunting or fishing in the woods or on the coasts of New Holland.

But in the cases of independent society which lie between the extremes, we should hardly find it possible to fix with absolute certainty the class of the given community. We should hardly

find it possible to determine with absolute certainty, whether the generality of its members did or did not obey one and the same superior. Or we should hardly find it possible to determine with absolute certainty, whether the general obedience to one and the same superior was or was not habitual. For example: During the height of the conflict between Charles the First and the Parliament, the English nation was broken into two distinct societies: each of which societies may perhaps be styled political, and may certainly be styled independent. After the conflict had subsided, those distinct societies were in their turn dissolved; and the nation was reunited, under the common government of the Parliament, into one independent and political community. But at what juncture precisely, after the conflict had subsided, was a common government completely re-established? Or at what juncture precisely, after the conflict had subsided, were those distinct societies completely dissolved, and the nation completely reunited into one political community? When had so many of the nation rendered obedience to the Parliament, and when had the general obedience become so frequent and lasting, that the *bulk* of the nation were *habitually* obedient to the body which affected sovereignty? And after the conflict had subsided, and until that juncture had arrived, what was the class of the society which was formed by the English people? – These are questions which it were impossible to answer with certainty, although the facts of the case were precisely known.

The positive mark of sovereignty and independent political society is therefore a fallible test. It would not enable us to determine of every *independent* society, whether it were *political* or *natural.*

The negative mark of sovereignty and independent political society is also an uncertain measure. It would not enable us to determine of every *political* society, whether it were *independent* or *subordinate.* – Given a determinate and common superior, and also that the bulk of the society habitually obey that superior, is that common superior free from a habit of obedience to a determinate person or body? Is that common superior sovereign and independent, or is that common superior a superior in a state of subjection?

In numerous cases of political society, it were impossible to answer this question with absolute certainty. For example:

Although the Holy Alliance dictates to the Saxon government, the commands which it gives, and the submission which it receives, are comparatively few and rare. Consequently, the Saxon government is sovereign or supreme, and the Saxon government and its subjects are an independent political society, notwithstanding its submission to the Holy Alliance. But, in case the commands and submission were somewhat more numerous and frequent, we might find it impossible to determine certainly the class of the Saxon community. We might find it impossible to determine certainly where the sovereignty resided: whether the Saxon government were a government supreme and independent; or were in a *habit* of obedience, and therefore in a state of subjection, to the allied or conspiring monarchs.

The definition or general notion of independent political society, is therefore vague or uncertain. Applying it to specific or particular cases, we should often encounter the difficulties which I have laboured to explain.

The difficulties which I have laboured to explain, often embarrass the application of those positive moral rules which are styled international law.

For example: When did the revolted colony, which is now the Mexican nation, ascend from the condition of an insurgent province to that of an independent community? When did the body of colonists, who affected sovereignty in Mexico, change the character of rebel leaders for that of a supreme government? Or (adopting the current language about governments *de jure* and *de facto*) when did the body of colonists, who affected sovereignty in Mexico, become sovereign *in fact*? – And (applying international law to the specific or particular case) when did international law authorize neutral nations to admit the independence of Mexico with the sovereignty of the Mexican government?

Now the questions suggested above are equivalent to this: – When had the inhabitants of Mexico obeyed that body so generally, and when had that general obedience become so frequent and lasting, that the *bulk* of the inhabitants of Mexico were *habitually* disobedient to Spain, and probably would not resume their discarded habit of submission?

Or the questions suggested above are equivalent to this: – When had the inhabitants of Mexico obeyed that body so generally,

and when had that general obedience become so frequent and lasting, that the inhabitants of Mexico were independent of Spain in practice, and were likely to remain permanently in that state of practical independence?

At that juncture exactly (let it have arrived when it may), neutral nations were authorized, by the morality which obtains between nations, to admit the independence of Mexico with the sovereignty of the Mexican government. But, by reason of the perplexing difficulties which I have laboured to explain, it was impossible for neutral nations to hit that juncture with precision, and to hold the balance of justice between Spain and her revolted colony with a perfectly even hand.

[This difficulty presents itself under numerous forms in international law: indeed almost the only difficult and embarrassing questions in that science arise out of it. And as I shall often have occasion to show, law strictly so called is not free from like difficulties. What can be more indefinite, for instance, than the expressions *reasonable* time, *reasonable* notice, *reasonable* diligence? than the line of demarcation which distinguishes libel and fair criticism; than that which constitutes a violation of copyright; than that degree of mental aberration which constitutes idiocy or lunacy? In all these cases, the difficulty is of the same nature with that which adheres to the phrases sovereignty and independent society; it arises from the vagueness or indefiniteness of the terms in which the definition or rule is inevitably conceived. And this, I suppose, is what people were driving at when they have agitated the very absurd enquiry whether questions of this kind are questions of law or of fact. The truth is that they are questions neither of law nor of fact. The fact may be perfectly ascertained, and so may the law, as far as it is capable of being ascertained. The rule is known, and so is the given species, as the Roman jurists term it; the difficulty is in bringing the species under the rule; in determining not what the law is, or what the fact is, but whether the given law is applicable to the given fact.]

I have tacitly supposed, during the preceding analysis, that every independent society forming a society political possesses the essential property which I will now describe.

In order that an independent society may form a

In order that an independent society may form a society political, it must not fall short of a *number* which cannot be fixed with

precision, but which may be called considerable, or not extremely minute. A given independent society, whose number may be called inconsiderable, is commonly esteemed a *natural*, and not a *political* society, although the generality of its members be habitually obedient or submissive to a certain and common superior.

society political, it must not fall short of a number *which cannot be fixed with precision, but which may be called considerable, or not extremely minute.*

Let us suppose, for example, that a single family of savages lives in absolute estrangement from every other community. And let us suppose that the father, the chief of this insulated family, receives habitual obedience from the mother and children. – Now, since it is not a limb of another and larger community, the society formed by the parents and children is clearly an independent society. And, since the rest of its members habitually obey its chief, this independent society would form a society political, in case the number of its members were not extremely minute. But, since the number of its members is extremely minute, it would (I believe) be esteemed a society in a state of nature: that is to say, a society consisting of persons not in a state of subjection. Without an application of the terms which would somewhat smack of the ridiculous, we could hardly style the society a society *political* and independent, the imperative father and chief a *monarch* or *sovereign*, or the obedient mother and children *subjects*. – 'La puissance politique' (says Montesquieu) 'comprend nécessairement l'union de plusieurs familles.'

Again: let us suppose a society which may be styled independent, or which is not a limb of another and larger community. Let us suppose that the number of its members is not extremely minute. And let us suppose it in the savage condition, or in the extremely barbarous condition which closely approaches the savage.

Inasmuch as the given society lives in the savage condition, or in the extremely barbarous condition which closely approaches the savage, the generality or bulk of its members is not in a habit of obedience to one and the same superior. For the purpose of attacking an external enemy, or for the purpose of repelling an attack made by an external enemy, the generality or bulk of its members, who are capable of bearing arms, submits to one leader, or to one body of leaders. But so soon as that exigency passes, this transient submission ceases; and the society reverts to the state which may be deemed its ordinary state. The bulk of each

of the families which compose the given society, renders habitual obedience to its own peculiar chief: but those domestic societies are themselves independent societies, or are not united or compacted into one political society by general and habitual obedience to a certain and common superior. And, as the bulk of the given society is not in a habit of obedience to one and the same superior, there is no law (simply or strictly so styled) which can be called the law of that given society or community. The so-called laws which are common to the bulk of the community, are purely and properly customary laws: that is to say, laws which are set or imposed by the general opinion of the community, but which are not enforced by legal or political sanctions. – The state which I have briefly delineated, is the ordinary state of the savage and independent societies which live by hunting or fishing in the woods or on the coasts of New Holland. It is also the ordinary state of the savage and independent societies which range in the forests or plains of the North American continent. It was also the ordinary state of many of the German nations whose manners are described by Tacitus.

Now, since the bulk of its members is not in a habit of obedience to one and the same superior, the given independent society would (I believe) be esteemed a society in a state of nature: that is to say, a society consisting of persons not in a state of subjection. But such it could not be esteemed, unless the term *political* were restricted to independent societies whose numbers are not inconsiderable. Supposing that the term *political* applied to independent societies whose numbers are extremely minute, each of the independent families which constitute the given society would form of itself a political community: for the bulk of each of those families renders habitual obedience to its own peculiar chief. And, seeing that each of those families would form of itself an independent political community, the given independent society could hardly be styled with strictness a natural society. Speaking strictly, that given society would form a congeries of independent political communities. Or, seeing that a few of its members might not be members also of those independent families, it would form a congeries of independent political communities mingled with a few individuals living in a state of nature. – Unless the term *political* were restricted to independent

societies whose numbers are not inconsiderable, few of the many societies which are commonly esteemed natural could be styled natural societies with perfect precision and propriety.

For the reasons which I have now produced, and for reasons which I pass in silence, we must, I believe, arrive at the following conclusion. – A given independent society, whose number may be called inconsiderable, is commonly esteemed a *natural*, and not a *political* society, although the generality of its members be habitually obedient or submissive to a certain and common superior.

And arriving at that conclusion, we must proceed to this further conclusion. – In order that an independent society may form a society political, it must not fall short of a *number* which may be called considerable.

The lowest possible number which will satisfy that vague condition cannot be fixed precisely. But, looking at many of the communities which commonly are considered and treated as independent political societies, we must infer that an independent society may form a society political, although the number of its members exceed not a few thousands, or exceed not a few hundreds. The ancient Grison Confederacy (like the ancient Swiss Confederacy with which the Grison was connected) was rather an alliance or union of independent political societies, than one independent community under a common sovereign. Now the number of the largest of the societies which were independent members of the ancient Grison Confederacy hardly exceeded a few thousands. And the number of the smallest of those numerous confederated nations hardly exceeded a few hundreds.

The definition of the terms *sovereignty* and *independent political society*, is, therefore, embarrassed by the difficulty following, as well as by the difficulties which I have stated in a foregoing department of my discourse. – In order that an independent society may form a society political, it must not fall short of a *number* which may be called considerable. And the lowest possible number which will satisfy that vague condition cannot be fixed precisely.

But here I must briefly remark, that, though the essential property which I have now described is an essential or necessary property of *independent* political society, it is not an essential

property of *subordinate* political society. If the independent society, of which it is a limb or member, be a political and not a natural society, a subordinate society may form a society political, although the number of its members might be called extremely minute. For example: A society incorporated by the state for political or public purposes is a society or body politic: and it continues to bear the character of a society or body politic, although its number be reduced, by deaths or other causes, to that of a small family or small domestic community.

Certain of the definitions of the term sovereignty, *and of the implied or correlative term* independent political society, *which have been given by writers of celebrity.*

Having tried to determine the notion of sovereignty, with the implied or correlative notion of independent political society, I will produce and briefly examine a few of the definitions of those notions which have been given by writers of celebrity.

Distinguishing *political* from *natural* society, Mr. Bentham, in his Fragment on Government, thus defines the former: 'When a number of persons (whom we may style *subjects*) are supposed to be in the *habit* of paying *obedience* to a person, or an assemblage of persons, of a known and certain description (whom we may call *governor* or *governors*), such persons altogether (*subjects* and *governors*) are said to be in a state of political society.' And in order to exclude from his definition such a society as the single family conceived of above, he adds a second essential of political society, namely that the society should be capable of indefinite duration. – Considered as a definition of independent political society, this definition is inadequate or defective. In order that a given society may form a society political and independent, the superior habitually obeyed by the bulk or generality of its members must not be habitually obedient to a certain individual or body: which negative character or essential of independent political society Mr. Bentham has forgotten to notice. And, since the definition in question is an inadequate or defective definition of *independent* society, it is also an inadequate or defective definition of political society in general. Before we can define political society, or can distinguish political society from society not political, we must determine the nature of those societies which are at once political and independent. For a political society which is not independent is a member or constituent parcel of a political society which is. Or (changing the expression) the powers or rights of subordinate political superiors are merely emanations of

sovereignty. They are merely particles of sovereignty committed by sovereigns to subjects.

According to the definition of independent political society which is stated or supposed by Hobbes in his excellent treatises on government, a society is not a society political and independent, unless it can maintain its independence, against attacks from without, by its own intrinsic or unaided strength. But if power to maintain its independence by its own intrinsic strength be a character or essential property of an independent political society, the name will scarcely apply to any existing society, or to any of the past societies which occur in the history of mankind. The weaker of such actual societies as are deemed political and independent, owe their precarious independence to positive international morality, and to the mutual fears or jealousies of stronger communities. The most powerful of such actual societies as are deemed political and independent could hardly maintain its independence, by its own intrinsic strength, against an extensive conspiracy of other independent nations. – Any political society is (I conceive) independent, if it be not dependent in fact or practice: if the party habitually obeyed by the bulk or generality of its members be not in a habit of obedience to a determinate individual or body.

In his great treatise on international law, Grotius defines sovereignty in the following manner. '*Summa potestas civilis* illa dicitur, cujus, actus alterius juri non subsunt, ita ut alterius voluntatis humanæ arbitrio irriti possint reddi. Alterius cum dico, ipsum excludo, qui summa potestate utitur; cui voluntatem mutare licet.' Which definition is thus rendered by his translation and commentator Barbeyrac. '*La puissance souveraine* est celle dont les actes sont indépendans de tout autre pouvoir supérieur, en sorte qu'ils ne peuvent être annullez par aucune autre volonté humaine. Je dis, *par aucune autre volonté humaine*; car il faut excepter ici le souverain lui-même, à qui il est libre de changer de volonté.' – Now in order that an individual or body may be sovereign in a given society, two essentials must unite. The generality of the given society must render habitual obedience to that certain individual or body: whilst that individual or body must not be habitually obedient to a determinate human superior. In order to an adequate conception of the nature of international morality, as in order to

an adequate conception of the nature of positive law, the former as well as the latter of those two essentials of sovereignty must be noted or taken into account. But, this notwithstanding, the former and positive essential of sovereign or supreme power is not inserted by Grotius in that his formal definition. And the latter and negative essential is stated inaccurately. Sovereign power (according to Grotius) is perfectly or completely independent of other human power; inasmuch that its acts cannot be annulled by any human will other than its own. But if perfect or complete independence be of the essence of sovereign power, there is not in fact the human power to which the epithet *sovereign* will apply with propriety. Every government, let it be never so powerful, renders occasional obedience to commands of other governments. Every government defers frequently to those opinions and sentiments which are styled international law. And every government defers habitually to the opinions and sentiments of its own subjects. If it were not in a habit of obedience to the commands of a determinate party, a government has all the independence which a government can possibly enjoy.

According to Von Martens of Göttingen (the writer on positive international law already referred to), 'a sovereign government is a government which *ought* not to receive commands from any external or foreign government.' – Of the conclusive and obvious objections to this definition of sovereignty the following are only a few. 1. If the definition in question will apply to sovereign governments, it will also apply to subordinate. If a sovereign ought to be free from the commands of foreign governments, so ought every government which is merely the creature of a sovereign, and which holds its powers or rights as a mere trustee for its author. 2. Whether a given government be or be not supreme, is rather a question of fact than a question of international law. A government reduced to subjection is actually a subordinate government, although the state of subjection wherein it is actually held be repugnant to the positive morality which obtains between nations or sovereigns. Though, according to that morality, it *ought* to be sovereign or independent, it is subordinate or dependent in practice. 3. It cannot be affirmed absolutely of a sovereign or independent government, that it *ought* not to receive commands from foreign or external governments. The intermeddling of inde-

pendent governments with other independent governments is often repugnant to the morality which actually obtains between nations. But according to that morality which actually obtains between nations (and to that international morality which general utility commends), no independent government ought to be freed completely from the supervision and control of its fellows. 4. In this definition by Von Martens (as in that which is given by Grotius) there is not the shadow of an allusion to the positive character of sovereignty. The definition points at the relations which are borne by sovereigns to sovereigns: but it omits the relations, not less essential, which are borne by sovereigns to their own subjects.

The ensuing portion of the present lecture is concerned with the following topics. – 1. The forms of supreme government. 2. The limits of sovereign power. 3. The origin of government, or the origin of political society.

I have now endeavoured to determine the general notion of sovereignty, including the general notion of independent political society. But in order that I may further elucidate the nature or essence of sovereignty, and of the independent political society which sovereignty implies, I will call the attention of my hearers to a few concise remarks upon the following subjects or topics. – 1. The various shapes which sovereignty may assume, or the various possible forms of supreme government. 2. The real and imaginary limits which bound the power of sovereigns, and by which the power of sovereigns is supposed to be bounded. 3. The origin of government, with the origin of political society: or the causes of the habitual obedience which is rendered by the bulk of subjects, and from which the power of sovereigns to compel and restrain the refractory is entirely or mainly derived.

The forms of supreme government.

An independent political society is divisible into two portions: namely, the portion of its members which is sovereign or supreme, and the portion of its members which is merely subject. The sovereignty can hardly reside in *all* the members of a society: for it can hardly happen that some of those members shall not be naturally incompetent to exercise sovereign powers. In most actual societies, the sovereign powers are engrossed by a single member of the whole, or are shared exclusively by a very few of its members: and even in the actual societies whose governments are esteemed popular, the sovereign number is a slender portion of the entire political community. An independent political society governed by itself, or governed by a sovereign body consisting of the whole community, is not impossible: but the existence of such

societies is so extremely improbable, that, with this passing notice, I throw them out of my account.[13]

Every supreme government is a monarchy *(properly so called) or an* aristocracy *(in the generic meaning of the expression). In other words, it is a government of* one, *or a government of a* number.

Every society political and independent is therefore divisible into two portions: namely, the portion of its members which is sovereign or supreme, and the portion of its members which is merely subject. In case that sovereign portion consists of a single member, the supreme government is properly a *monarchy*, or the sovereign is properly a *monarch*. In case that sovereign portion consists of a number of members, the supreme government may be styled an *aristocracy* (in the generic meaning of the expression). – And here I may briefly remark, that a monarchy or government of one, and an aristocracy or government of a number, are essentially and broadly distinguished by the following important difference. In the case of a monarchy or government of one, the sovereign portion of the community is simply or purely sovereign. In the case of an aristocracy or government of a number, that sovereign portion is sovereign as viewed from one aspect, but is also subject as viewed from another. In the case of an aristocracy or government of a number, the sovereign number is an aggregate of individuals, and, commonly, of smaller aggregates composed by those individuals. Now, considered collectively, or considered in its corporate character, that sovereign number is sovereign and independent. But, considered severally, the individuals and smaller aggregates composing that sovereign number are subject to the supreme body of which they are component parts.

In every society, therefore, which may be styled political and

[13] If every member of an independent political society were adult and of sound mind, every member would be naturally competent to exercise sovereign powers: and if we suppose a society so constituted, we may also suppose a society which strictly is governed by itself, or in which the supreme government is strictly a government of all. But in every actual society, many of the members are naturally incompetent to exercise sovereign powers: and even in an actual society whose government is the most popular, the members naturally incompetent to exercise sovereign powers are not the only members excluded from the sovereign body. If we add to the members excluded by reason of natural incompetency, the members (women, for example), excluded without that necessity, we shall find that a great majority even of such a society is merely in a state of subjection. Consequently, though a government of all is not impossible, every actual society is governed by one of its members, or by a number of its members which lies between one and all.
